GUBBINI

MINI-HYSTERO-RESECTOSCOPY-SYSTEM

▸ 14.9 FR. ▸ 16 FR. ▸ 18.5 FR.

THE GUBBINI-SYSTEM:

DEFINING A NEW DIMENSION IN HYSTERO-RESECTOSCOPY

The original GUBBINI-Mini Hystero-Resectoscope with a diameter of 16 French was first introduced in 2010. By now, a full product line with three slightly different hybrid instruments, each of them for mono- or bipolar distension mediums and with a complete range of accessories, has evolved around the “original GUBBINI”.

GUBBINIoriginal

The original GUBBINI System features a 16 French round distal tip/sheath form, the introduction into the cervical canal does not require dilation.

GUBBINIellipse

Recently, sheaths with a distal tip of 14.9 French in elliptic form were added to the Gubbini System-Line: the GUBBINI Ellipse instruments facilitate the introduction without dilation also in stenotic patients.

GUBBINImidi

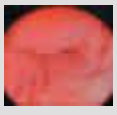
A third instrument set, the GUBBINI midi resectoscope of 18.5 French, is based upon the same innovative technical principles than its smaller siblings. Even though the size requires the dilation of the cervix, the small diameter clearly reduces the strain on patients. The GUBBINI midi features the excellent functionality and handiness of all GUBBINI systems, while the size and form of the loops facilitate the treatment of larger myoma, or more extended intracavitary lesions.

GUBBINI systems 14.9 & 16 French – matching the natural female anatomic conditions

Motivation to downsize the 24/26 French instruments commonly used in vaginoscopic procedures to “no more than 16 French” has been to avoid the painful dilation of the cervix, as well as unnecessary tissue damage.

- The small size of the sheaths allows the surgeon to perform operative procedures without vaginal instruments (no speculum; no tenaculum; no Hegar´s dilators)
- Miniature loops and micro instruments are ideally shaped to the given anatomical proportions
- Easier handling due to the minimized dimensions of the instruments; less weight
- The risk of intra- and post-operative complications is minimized thanks to the size and shape of instruments

THE CERVICAL CANAL
The cervix is typically 3-4 cm in length and 3 cm in diameter.



The narrowest location of the cervical canal is by nature extendable to a diameter of ~ 5 mm without pain sensation.

WELCOME TO THE GENTLE SIDE OF GYNECOLOGY …

The GUBBINI Systems with 14.9 Fr. and 16 Fr. clearly have the potential to revolutionize current proceedings in minimal invasive gynecology towards a more “gentle” approach with less traumatizing interventions in gynecology.

- No dilation of the cervical canal necessary
- Apt for treatment in office setting: It enables the treatment of pathologies which up to date often are still performed under general anesthesia, and/or require hospitalization.
- Optimization of the “See & Treat” approach: by simply exchanging the diagnostic working sheath with the inner continuous flow resectoscopic sheath – without the need of re-introduction of the outer sheath – diagnostic hysteroscopy and therapeutic resectoscopy can be performed during one single session.
- The bipolar current mode increases safety by using saline solution as physiologic distension medium (NaCl 0,9%). Other important safety aspects are the reduced risk of intra- and post-operative complications.
- Cost minimization (shorter operating times, less anesthesia, less complication risk, less hospitalization).

Contemporary Gynecology has generally shifted towards gentler treatment methods, and communication on eye-level between doctor and patient has gained importance.

RESULTS FROM CLINICAL STUDIES ARE:

- Shorter operation times in comparison to conventional 24/26 Fr. systems and other small instrument systems of competitors[1].
- Significantly less pain sensation – measured by VAS (Visual Analog Scale), even if compared to treatments under anesthesia with standard systems[1, 2].
- Progressive learning curve: The intuitive system enables surgeons to improve their technique by experience. To master the system, usually thirty procedures are required until a fast and nearly painless operation can be performed[2].
- Optimally adjusted electrodes – even 90° resections are possible, despite the small diameters of the resectoscopic sheaths[2].

CLINICAL VALIDATIONS:

[1] *Using a 16-French resectoscope as an alternative device in the treatment of uterine lesions: a randomized controlled trial.*

WIDE SPECTRUM OF INDICATIONS

The versatile GUBBINI instruments can be applied to nearly all standard endo-uterine procedures and could replace common hysteroscopes widely used in outpatient 5 mm surgery.

Its extraordinary successful performance in polypectomy and myomectomy has been shown in clinical validations; the system even provides miniature preparation loops for the cold myoma enucleation technique (G1, G2 Myoma).

The GUBBINI SYSTEM is also used on indications difficult to treat, like Asherman

What matters to the PATIENT about the Mini-Hystero-Resectoscope:

- Her surgery is as atraumatic as a gynecologic intervention can be
- She does not necessarily need anesthetics
- It allows her to go home right after an intervention for which she otherwise maybe would have to stay overnight

Recommended therapeutic and diagnostic options by Prof. Gubbini:

CERVICAL CANAL
Endocervical Polypectomy (upper, medium and lower third, ectocervical)

Targeted biopsy in case of unclear endocervical diagnosis

Hysteroscopic treatment of Isthmocele

Synechiolysis

UTERUS CAVITY
Biopsy of suspicious endometrial lesions

Polypectomy

Metroplasty: Hysteroscopic treatment of uterine malformations (f.e. Uterine Septum, Bicornuate Uterus)

Metrorrhagia/Abnormal Uterine Bleeding

Myomectomy (< 3 cm / 1.2 inch)

Endometrial ablation

Isthmocele

Asherman Syndrome

COMPONENTS FOR ALL THREE SYSTEMS

▶ GUBBINI working elements & HF-unit

Hybrid working elements for monopolar use or with bipolar current and conductive solution (NaCl 0.9%) in combination with the Mini-Resectoscopes GUBBINI original and the GUBBINI ellipse, or the GUBBINI midi (all article numbers see below).

GUBBINI hybrid working elements:

Light-weight and extremely ergonomic working elements – made with sections of highly resistant titanium.

Safety distance holder, optional.
The distance holder gets located at the working element between the insulating teflon block and the grip.

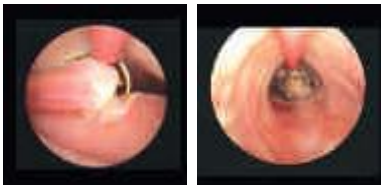
COMPONENTS FOR ALL THREE SYSTEMS

▶ Ø 2.9 mm telescopes

The „See & Treat“ approach has become a synonyme for office hysteroscopy. This already implies that the image quality is an essential criteria for each hysteroscopist: the clear visualization of a patient´s pathology is not only a prerequisite for secure diagnostics and the choice of intervention, but as well vital for a successful performance of therapeutic treatment.

For recommendations which telescopes to use in hysteroscopy and resectoscopy for each of the GUBBINI systems see the overview on page 34-35.



Pictures by Dr. Giampietro Gubbini

TELESCOPES FOR GYNECOLOGY [autoclavable] ▶ Ø 2.9 mm [also for use in Laparoscopy and Urology]

Description		Art. No.	
TELESCOPE HD+2 ▶ Ø 2.9 mm; 0°	FL 300 mm	601-103-00HD2	· Field of view: 80° · Compatible with most instrument- and camera systems
TELESCOPE HD+2 ▶ Ø 2.9 mm; 12°	FL 300 mm	601-103-12HD2	
TELESCOPE HD+2 ▶ Ø 2.9 mm; 30°	FL 300 mm	601-103-30HD2	

The “TONTARRA telescopes with the PLUS” feature a cutting edge optical technology which result in

- Exceptional brightness
- Brilliant, high contrast images even around the edges
- Optimum color rendering
- Outstanding optical transmission
- Scratch resistant (Sapphires at distal and proximal end)

The telescope body is of stainless steal, providing extra high durability and outstanding autoclavability for spotless hygiene (French cycle validated).

The triple tube design warrants unique bending resistance.

We recommend to use the HD+2 telescopes, which are optimized for 2nd generation & full HD imaging systems.

For further information please refer to our telescope catalogue, or contact us.

COMPONENTS FOR ALL THREE SYSTEMS

▶ Micro instrumentation

Most of the micro instruments can be used for all three systems, they are shown in the chapter MICRO INSTRUMENTS (page 30).

In Hysteroscopy, all SEMI-RIGID and FLEX-RIGID INSTRUMENTS and the MONO- and BIPOLAR ELECTRODES can be equally used with the GUBBINI Original, Ellipse and Midi system.

PREPARATION LOOPS (“Cold Loops”) used to prepare submucosal myoma for removal, are currently available for use with the GUBBINI original and ellipse systems.

HF ELECTRODES FOR RESECTOSCOPY

A variety of HF electrodes has been developed to provide optimal tools for resectoscopic procedures; they are available as reusable mono- & bipolar electrodes, and bipolar single-use electrodes. For GUBBINI Original and Ellipse, the HF electrodes are mainly the same; for a better overview, the electrodes for the different instrument systems are shown separately in the respective chapter of each of the systems, plus an overview on page 33.

COMPONENTS FOR ALL THREE SYSTEMS

▶ Continuous flow sheaths with different shapes

The original GUBBINI System features a round distal tip / sheath form, the introduction into the cervical canal does not require speculum, tenaculum nor Hegar´s dilators. Recently, sheaths with distal tip in teardrop-form were added to the GUBBINI System-Line: the GUBBINI Ellipse instruments facilitate the introduction also in stenotic patients.

GUBBINIoriginal

Round tip with small diameter: 16 Fr.

GUBBINIe||ipse

Elliptic formed tip for an easier introduction into the cervical canal.
Average diameter: 14.9 Fr.

GUBBINImidi

Oblique formed tip, 18.5 Fr.; (Dilatation and anesthesia required).

A KEY COMPONENT FOR ALL OF THE GUBBINI SYSTEMS: THE OUTER SHEATH

The one-time placement of the outer sheath, which remains inside the cervical canal during the change from hysteroscopic to resectoscopic procedures (and viceversa) optimally supports the „See & Treat“ approach of modern gynecology. This procedural method clearly shortens the operating time and reduces the strain on patients. The *Quick Lock* connections of all components enable an easy assembly and a smooth exchange of inner sheaths and working channel during the operation.

GUBBINI CONTINUOUS FLOW OUTER SHEATHS

The GUBBINI System is “fully hybrid” and can be used in mono- or bipolar mode. The trend clearly goes towards the use of saline-solution as distension medium for resectoscopic procedures thanks to its several advantanges:

· less risk for hyponatremia and hypervolemia
· less distension volume/less strain on the tissue
· lower work temperature on tissue during surgery which results in less necrosis around the treated areas
· reduction of peripheral nerve stimulation, especially of the N.obturatorius.

HYSTEROSCOPY

RESECTOSCOPY

EVALUATION “ELLIPSE” MINI-HYSTERO-RESECTOSCOPE SYSTEM

▶ By Dr. Giampietro Gubbini

The GUBBINI ELLIPSE SYSTEM extends the range of therapeutic options of modern hystero-resectoscopy and further diminishes the discomfort in patients.

▶ The “ELLIPSE” system marks the completion of the ambitious project “Mini-Hybrid Hystero-Resectoscope for mono- and bipolar use”, which was initiated several years ago with the aim to provide a less traumatic yet effective option for a wide range of hystero-resectoscopic interventions.

With the reduction of the diameter of commonly used 26 Fr. instruments to only 16 Fr. with a working channel of 5 Fr. (and a further reduction to 14.9 Fr. of the outer diameter in case of the ELLIPSE), the first high-performance mini-resectoscopes for all endo-uterine standard procedures have become available.

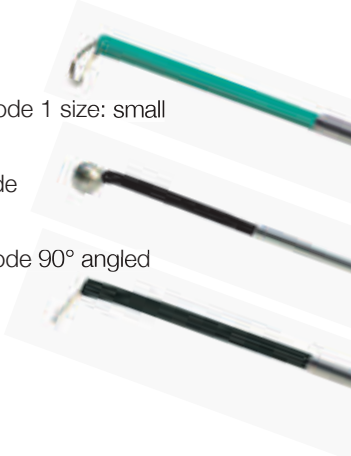
▶ By the one-time placement of the outer sheath, which remains inside the cervical canal during the hysteroscopic (rather diagnostic) procedure and the resectoscopic (surgical) intervention, the already well-established “See & Treat” approach has been largely optimized.

▶ The elliptic profile makes the instrument more ergonomic and complacent towards the orifice of the uterine and cervical canal. The design of the ceramic coated distal section of the outer ELLIPSE sheath enables the use of 2.9 mm optics with 0° and 12° for hysteroscpic procedures, and allows to expand the “See and Treat” procedure of the mini-resectoscope by enabling the use of 0° and 12° telescopes.

▶ Hysteroscopic procedures on an outpatient basis with vaginoscopic approach and the treatment of pathologies, in which the mini-resectoscope with the round profil might encounter difficulties in its path due to extremely stenotic conditions – such as cervical or endometrial polyps or uterus septus – can now be performed with the clearly less atraumatic ELLIPSE mini-resectoscope, and could replace common hysteroscopes widely used in outpatient 5 mm surgery.

The GUBBINI ELLIPSE model features the same high versatility than the other GUBBINI instruments with resectoscopic loops and
tools for 5 Fr. working channels.

The loops available for this system correspond to the ones used with the original mini-resectoscope:



▶ HF-Loop electrode 1 size: small

▶ HF-Ball electrode

▶ HF-Knife electrode 90° angled

OUTER SHEATH to combine with inner sheath or working sheath 	582-150-24GUE	
GUBBINI ELLIPSE CONTINUOUS FLOW SHEATH		0° 12°
INNER SHEATH non-rotatable 	582-150-21GUE	
WORKING ELEMENT; further information see page 8	582-150-00GUB	

GUBBINI ELLIPSE WORKING SHEATH

▶ Telescope 12° and 30° recommended for hysteroscopy QL

Description	Art. No.	Information
WORKING SHEATH with instrument channel 5 Fr. and channel for Ø 2.9 mm telescope. Designed for use with electrodes and 5 Fr. semi-rigid instruments. 	582-150-39GUE	12° 30°
SEALING CAP for instrument channel; 10 pcs./box	499-199-00	
SEALING CAP for instrument channel with special water stop valve; 10 pcs./box	499-198-00	

- ▶ The ELLIPSE WORKING SHEATH: transforms the mini-resectoscope into a highly versatile hysteroscope
- ▶ Adapted to the elliptic form of the outer sheath
- ▶ Change without removal of the outer sheath
- ▶ Easy assembly thanks to *QLS Quick Lock* System

SALINÆ disposable electrode	582-150-43GUB-S	—	

The GUBBINI System is “fully hybrid” and can be used in mono- or bipolar mode. The trend clearly goes towards the use of saline-solution as distension medium for resectoscopic procedures thanks to its several advantanges:

· less risk for hyponatremia and hypervolemia
· less distension volume/less strain on the tissue
· lower work temperature on tissue during surgery which results in less necrosis around the treated areas
· reduction of peripheral nerve stimulation, especially of the N.obturatorius.

HF CONNECTION CABLES; BIPOLAR
▶ to connect working element to HF generator; bipolar mode for resectoscopy

GUBBINI

GUBBINImidi

◀ 18.5 Fr.

HYSTEROSCOPY

RESECTOSCOPY

GUBBINI HYSTERO-RESECTOSCOPY SYSTEM „midi“

▶ 18.5 Fr.

The GUBBINI midi hybrid hystero-resectoscope 18.5 French is based upon the same innovative technical principles than its smaller siblings GUBBINI (16 Fr.) and GUBBINI Ellipse (14.9 Fr.), and is suitable for use with:

- ▶ bipolar current and conductive saline solution (NaCl 0.9%)
- ▶ monopolar current and no-conductive solution (Sorbitol, Mannitol, Glycine).

Even though the size requires the dilation of the cervix and with that, anesthesia, the small diameter and the time-saving one-time placement of the outer sheath clearly reduces unneccessary tissue damages and the strain on patients.

The GUBBINI midi features the excellent functionality and handiness of all GUBBINI systems, while the size of the loops facilitates the treatment of larger myoma, or more extended intracavitary lesions.

- One-time placement of outer sheath
- Rotatable and non-rotatable inner sheaths available
- To be used with Ø 2.9 mm, 0°, 12°, 30° telescopes
- Variety of specially designed HF electrodes, preparation electrodes and semi-rigid instruments available
- *Quick Lock* connecting system: Easy assembly and disassembly, allows a smooth change of sheaths during an intervention with tight sealing of the two connected sheaths
- Working element with structural sections and hinges of light-weighted Titanium
- Perfectly optimized continuous flow rate for a clear view
- Fully hybrid – the GUBBINI midi is suitable for bipolar modus in physiologic distension medium (Saline solution only: NaCl 0.9%), or monopolar use.

GUBBINI SYSTEM: RESECTOSCOPY

GUBBINIoriginal
GUBBINIellipse

▶ Preparation Loops ("Cold Loops“) for GUBBINI original and GUBBINI ellipse SYSTEM

“Cold Loops”: Efficient & safe myomectomy of submucosal myoma

Designed specifically for treating submucosal G1 and G2 Myomas

“Cold Loops”, so-called because they are used without HF current, only employ mechanical energy for enucleation.

PREPARATION LOOPS („Cold Loops“)

▶ for use with working element Art. No. 582-150-00GUB and round continuous flow sheath ⇨ 16 Fr.

Description	Art. No.	
J-HOOK PREPARATION LOOP; small; non-HF	582-150-45GU	
J-HOOK PREPARATION LOOP; medium; non-HF	582-150-46GU	
CIRCULAR PREPARATION LOOP; non-HF	582-150-47GU	
LANCET PREPARATION LOOP 60°; non-HF	582-150-48GU	
SPATULA PREPARATION LOOP; non-HF	582-150-49GU	

▶ For currentless use only

▶ CAUTION: The preparation loops may never be used when the current is on. Make absolutely sure that the resectoscope is not connected to any HF-unit when you are using the preparation loops.

Advantages of “Cold Loops”and the mechanical enucleation technique:

- Less traumatizing intervention: less weakening of the myometrium
- Avoiding of thermal damage to blood vessels: the vascularized connective tissue bridges are lacerated without the use of any type of HF current
- No forming of fibrotic scarring during the healing process

THE METHOD IN SHORT:

Following the elimination of the intracavitary component using the traditional resectoscopic „slicing“ technique with a monopolar or bipolar current, the intramural component gets removed by using „Cold Loops“ by exercising force in the cleavage space between the myoma and the surrounding myometrium to separate the myoma from the uterine wall. Thus, the intramural component of the myoma is transformed into an intracavitary component, which can then be removed using the traditional technique.

ACCESSORIES FOR THE GUBBINI SYSTEMS

▶ Telescopes & equipment

TELESCOPES [autoclavable] ▶ Ø 2.9 mm

Description			Art. No.	
TELESCOPE HD+2	▶ Ø 2.9 mm; 0°	FL 300 mm	601-103-00HD2	· Field of view: 80° · Compatible with most instrument- and camera systems
TELESCOPE HD+2	▶ Ø 2.9 mm; 12°	FL 300 mm	601-103-12HD2	
TELESCOPE HD+2	▶ Ø 2.9 mm; 30°	FL 300 mm	601-103-30HD2	

FIBER LIGHT GUIDE CABLES Ø 3.5 mm ▶ Stability & resistance for a long life time ▶ without connectors

Description	Standard Cold Light Line	HTT High Temperature Technology Line
Cold light sources	HALOGEN careful w/Xenon light!	XENON
Sizes	**Art. No.'s**	
Ø 3.5 x 1800 mm Length	540-803-18	540-813-18
Ø 3.5 x 2300 mm Length	540-803-23	540-813-23
Ø 3.5 x 3000 mm Length	540-803-30	540-813-30
Ø 3.5 x 5000 mm Length	540-803-50	540-813-50
Tube colours The Standard colour is grey.	Only available in grey	● LL (Lilac) ● YW (Yellow) ● GN (Green) **Colour Coding made easy:** If you want to order one of the shown colours Lilac, Yellow or Green, please indicate the corresponding extensions shown in the column to the right (f.e. for a green cable add „GN", the article number then reads 540-XXX-XXGN)
Handle Colours	Black	Blue

LIGHT CABLE CONNECTORS

Projector-side (light input)			Telescope-side (light output)

ACCESSORIES FOR THE GUBBINI SYSTEMS

▶ HF Unit and HF connection cables

HF UNIT PLASMA WAVE

Description	Art. No.	
PWT-400 Plasma Wave; HF generator for electrical surgery	540-280-50	

HF CONNECTION CABLES; BIPOLAR ▶ to connect working element to HF generator; bipolar mode for resectoscopy

Description	Length	Art. No.	Instrument-side	Unit-side
Erbe ICC/ACC, Storz	3.0 m	287-200-30BR		
Berchthold/ Martin mod. Maxium	3.0 m	287-205-30BR		
TONTARRA mod. PWT-400; International Models; 2-pins	3.0 m	287-215-30BR		
Erbe mod. VIO300D; Erbe mod. VIO3 with multi-contact connector; Karl Storz mod. Autocon II 400	4.0 m	287-220-30BR		
Emed-HF mod. Spectrum	4.5 m	287-225-30BR		
Bowa mod.; ARC 350 & 400	4.5 m	287-230-30BR		

HF CONNECTION CABLES; BIPOLAR ▶ to connect flexible bipolar HF electrodes for hysteroscopy to HF generator

Available for following units:	3.0 m	5.0 m	Instrument-side	Unit-side
Erbe ICC/ACC, Storz/unit side round plug	287-200-30	287-200-50		
Berchthold/Martin/unit side round plug	287-205-30	287-205-50		
Us-Models; 2-pins/unit side banana plugs	287-210-30	287-210-50		
Valleylab; International Models; 2 pins	287-215-30	287-215-50

ACCESSORIES FOR THE GUBBINI SYSTEMS

- Monopolar HF connection cables
- Storage & sterilization
- Local anasthesia

HF CONNECTION CABLES; MONOPOLAR

- to connect working element to HF generator; monopolar mode for resectoscopy
- to connect flexible monopolar HF electrodes for hysteroscopy to HF generator

Available for following units:	3.0 m	Instrument-side	Unit-side
Aesculap/Rudolf/Martin/Berchthold GN; Ø 4.0 mm	582-530-01		
Erbe/ICC/ACC/Storz; Ø 5.0 mm	582-531-02		
Valleylab, Conmed; Ø 8.0 mm	582-532-03		
Equipment with banana plug; Ø 4.0 mm	582-533-04		

PERFORATED SHEET BASKET FOR GUBBINI SYSTEM; complete with holders for instruments and telescopes

Description:	Art. No.	
PERFORATED SHEET BASKET ▶ 480 mm (L) x 245 mm (W) x 80 mm (H)	582-150-60GU	

HYSTEROBLOCK - UTERINE PARACERVICAL BLOCK NEEDLE 270 mm

Description:	Art. No.	
HYSTERO-BLOCK NEEDLE; Ø 20G ▶ 10 pc./unit ▶ Pain reduction made easy, safe and reliable by placing injections at two points of the right and left lateral vaginal fornix.	Belo/2-PB02N	

Produced by BEL Bio Engineering Laboratories S.R.L, Ital - distributed by TONTARRA

DR. RAFFAELE RICCIARDI

▶ An expert in Mini-Resectoscopy

PARACERVICAL LOCAL BLOCKADE IN MINI-RESECTOSCOPY

"Applying injection of local anesthetics before hysteroscopic office procedures leads to significant pain reduction".

The practical guideline in office hysteroscopy,
by SEGI (Società Italiana di Endoscopia Ginecologica)

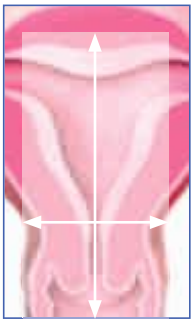
Dr. Raffaele RICCIARDI is one of the most experienced PhDs for the Gubbini System. He introduces doctors from around the world to the multiple therapeutic options of 14.9 Fr. and 16 Fr. Mini-resectoscopy in the operation theatre or in an office setting.

With more than 60,000 diagnostic and operative hysteroscopic procedures Dr. Raffaele Ricciardi is one of the top experts in the field. He also published and co-authored several studies and articles. Dr. Ricciardi annually performs 1300 surgeries, of these over 700 with paracervical local blockades.

The mini-sizes of the GUBBINI original and ellipse instruments allow to perform hysteroscopic and resectoscopic interventions without anesthesia at all. Still, some patients will need at least local anesthesia.

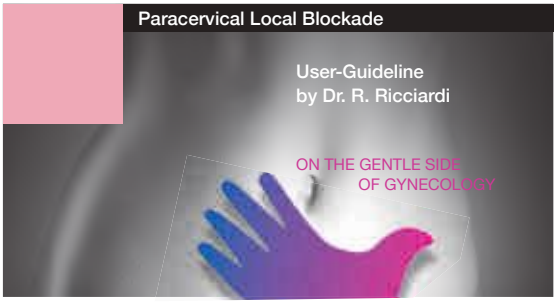
Criteria to apply local anesthesia on the patient´s side are anatomic circumstances (for example patients who never gave birth may experience more pain), or the anticipated anxiety and stress level during an intervention; applying local anesthesia is reassuring for patient and gynecologist alike.

Another criteria is of course the intervention itself; its duration is a determing factor for pain sensation. Another point is the experience of the surgeon: the learning curve is described to take around 30 surgeries until optimal results in regards to patient convenience is reached.



Anesthetized area

In any case: Anesthesia assistance should be within reach in case of an emergency (remember: The Gubbini System can often substitute commonly used larger instruments for interventions under general anesthesia, which usually require hospitalization).



Please contact us for further information and the *User-Guideline* by Dr. Ricciardi:
gubbini@tontarra.de

Dr. Raffaele RICCIARDI

born in Andria, Italy, in 1953, graduated *cum laude* in Medicine at the University of Pavia in 1977, and received his Certification as a specialist in Obstetrics and Gynecology in 1982.

In 1983 he started his brilliant career as a gynecologist at the renowned IRCCS (Institute for Research and Health Care) polyclinic "Casa Sollievo della Sofferenza", San Giovanni Rotondo. Since 1985 he dedicated himself intensively to diagnostic and operative hysteroscopy, participating as instructor, lecturer and speaker in several courses, conferences and congresses around the world.

In 1998 he became a member of the Executive Council at the Diagnostic and Operative Hysteroscopy School "Arbor Vitae", directed by Prof. Ivano Mazzon (based in Rome).

Since 2007 he is the Director of the Hysteroscopy Department, Abano Terme Polyclinic.

Reference center for Mini-Resectoscopy

MINI RESECTOSCOPY Reference centers

The Gubbini System had first been introduced in Italy, a country with well-known tradition in the development of modern gynecology. There, three clinics alone perform more than 1.500 operations with the Gubbini System per year.

By now, the GUBBINI System has made its way into prestigious clinics in many parts of the world. Please inquire for a list of reference clinics and training options: gubbini@tontarra.de
